## Projects

---

### Collage Management System

- Develop a full-stack web application for collage management using HTML, BOOTSTRAP, JAVASCRIPT, PHP. I did my job as a Backend developer in this project and I also add some basic payment system and online verification.

### Blood Donation App (FLUTTER)

- Developed a cross-platform Blood Donation app using FLUTTER and FIREBASE, allowing users to register, log in, request or donate blood. Implemented Firebase Authentication for secure login and Firestore for real-time data storage. Designed a responsive and user-friendly UI with Flutter..

### Online Learning (MERN Stack & Java Development)

- Developed a full-stack online learning web app using the MERN stack (React, Node.js, Express, MongoDB) with Tailwind CSS. Implemented JWT-based authentication, RESTful APIs, and a responsive user interface. Enabled user registration, login, course enrollment, and content viewing.
- Built a Java-based application to manage [e.g., student records], using JDBC for database connectivity. Applied object-oriented principles, exception handling, and file I/O with a modular design for better scalability and maintainability.

### TextUtils (React.js)

- Built a React.js single-page app for live text manipulation with features like case conversion, whitespace removal, clipboard support, dark/light mode, and real-time text stats. Used React Hooks, React Router, and Bootstrap for state management, navigation, and styling.
